Dear Colleagues,

I would like to introduce you to an innovative treatment modality that I have been using successfully in my practice since March of 2001. It is a medical device called the Immuno-Genic 2000 or the Ig2000. This noninvasive device modulates the immune system and generates rapid, sustained healing for the treatment of wounds, arthritic conditions, viral/bacterial infections and others. There is a marked difference in tissue integrity after one to two treatments, immediate improvement in agility, and reduced recovery time for upper respiratory infections. It is my first treatment regime in respiratory problems in pups and kittens. There are both local and systemic effects which shorten the course of the viral infection significantly. The main use in my office is on wounds, acute trauma and arthritis but it has many other applications. It is eye safe for the patient and the operator and we use it to treat corneal ulcers. Its use on Degloving wounds is amazing. I own two machines that are in constant use in our clinic. If you would like more information please call me at 1-352-636-4926 or call Mary Brown at Immuno-Genic Corporation Inc., 1-386-492-4836. This modality will provide your patients with superior treatment and greater client satisfaction while adding an additional source of revenue for your practice.

Kelly Bradford, DVM
